

ABSTRACT

Method and System for Probing in a Network Environment

5 An example of a solution provided here comprises: providing a
script; employing a plurality of probes, including at least one
local probe and at least one remote probe; and measuring a
client-server application's performance, with said probes,
according to said script. For example, the following are
provided: methods for probing client-server applications in a
10 network environment, systems for executing such methods, and instructions on a
computer-usable medium, for executing such methods.
